

## ROD OF MAGIC DETECTION

These crystalline rods are sensitive to the presence of magic and can even differentiate between different types of arcane energy. The color of the rod will change depending on the school of the magical effect it comes in contact with, and arcane detectives will often use these tools to aid them in their supernatural investigations.

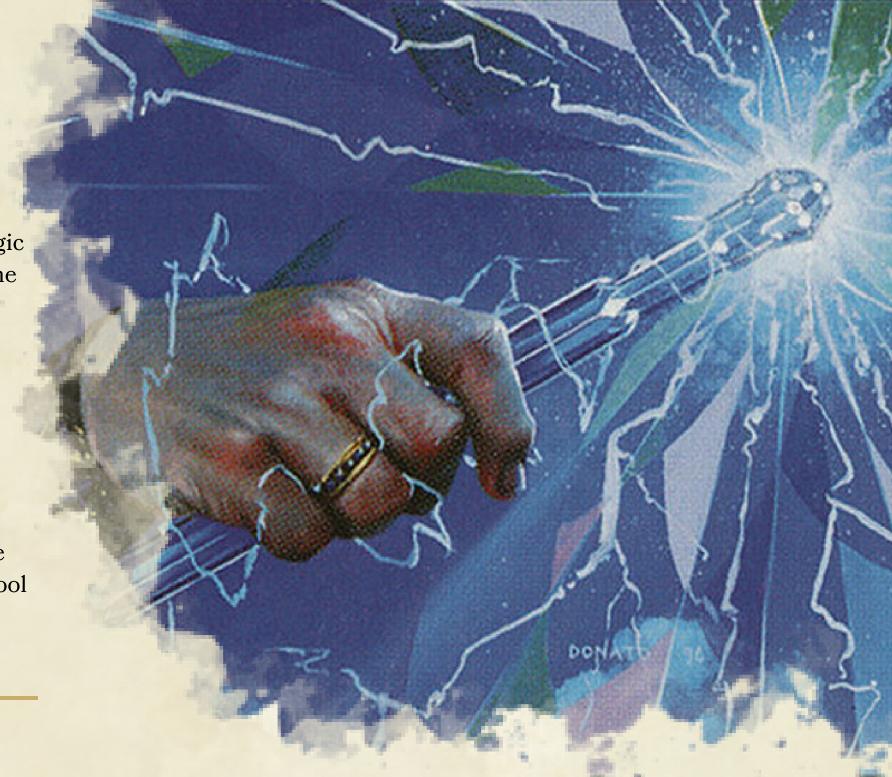

### ROD OF MAGIC DETECTION

*Rod, uncommon*

While holding this rod, you may use an action to touch a creature or object with it. If the target bears any magic, the rod will glow with a color the varies depending on the school of magic it detects from the target.
